

Bearded Dragon

OVERVIEW

- Scientific Name: *Pogona vitticeps*
- Origin: Central Australia
- Ease of Care: Beginner
- Potential Adult Size: 18 to 22 inches
- Life Span: 15 years
- Behaviour: Diurnal
- Diet: Omnivore
- Handling: Beginner

TOP TIPS

- ✓ A Vivarium is best suited for Bearded Dragons
- ✓ Vary your Bearded Dragons food to keep it stimulated
- ✓ Use a sand scoop when spot cleaning

EQUIPMENT NEEDED

- Housing: Vivarium
- Heating: Heat Bulb
- Lighting: UV Tube
- Thermostat: Dimming (High Range)
- Substrate: HabiStat Bearded Dragon Bedding
- Water: Water bowl

HOUSING

Hatchling/Juvenile -

HabiStat Standard Vivarium 36x24x24"

Adult -

HabiStat Standard Vivarium 48x24x24"

HabiStat Standard Vivarium 60x24x24"

HabiStat Standard Vivarium 72x24x24"

RUNNING COSTS

- Average Cost: 37p Per Day
- Average kW per day: 1.315

Calculations are based on using the recommended timings, heating, and lighting provided throughout the care sheet, and the Electricity unit rate of 28p per kWh.

ENVIRONMENT

Terrestrial Vivarium Setup

Enclosure Readings

- Hot Spot: 38-40°C (100-104°F)
- Background Temp: 23°C-30°C (73°F-86°F)
- Night-Time Temp: 16°C-23°C (61°F-74°F)
- Humidity: 30%-40%
- UVI: 4-6

Heating

Bearded Dragons are a diurnal species and require a suitable light and heat gradient in the enclosure to simulate a complete 24-hour period.

The HabiStat Bearded Dragon Accessory Kit provides all the light, heat, and safety elements for the enclosure in one handy kit. Use the Arcadia Pro Ceramic Lamp Holder & Bracket with the HabiStat Heat Bulb 100w running through the HabiStat Dimming Thermostat (High Range).

Dimming thermostats are designed to regulate temperatures using a thermostat

probe (also known as a sensor). Correct placement of the probe is critical to avoid overheating and injury to the animal.

Check temperatures regularly, using a reliable dual thermometer and hygrometer to ensure that there are no extreme fluctuations.

Lighting

Fit the Arcadia Pro T5 UVB Kit, 12%, or alternatively the Arcadia LumenIZE Pro T5 UVB Kit 12% to the inside roof of the vivarium.

Ensure that it is fitted correctly and within the manufactures recommended distances, providing a UVI of 4-6.

Substrates and Decoration

Personal choice will dictate how you decorate your enclosure, but we recommend the following as a guide:

- HabiStat Bearded Dragon Bedding
- HabiStat Cork Branch, HabiStat Grapevine and HabiStat Tea Tree Branch will offer shelter and enrichment within the enclosure.
- Live or artificial plant decoration will provide darker areas for the animal to use as shelter

DIET & WATER

Ensure a Bearded Dragon has a varied diet, with a mixture of insects and Greens.

Young/Juvenile - A small bowl of Greens, daily. Several appropriately sized feeders 2 to 3 times per week such as:

- Crickets – 3rd
- Locust – Small Hopper
- Calci Worms

Adult – A small bowl of Greens, daily.

Several appropriately sized feeders per week such as:

- Crickets – Large
- Locust – 3rd Hopper
- Dubia Roaches – Medium

Always provide a source of fresh water. The HabiStat Sandstone Water Dish will provide a safe and sturdy option.

To maintain and regulate humidity within the enclosure, mist as required.

SUPPLEMENTATION

Following a supplementation regime that involves calcium and multivitamin powders such the following will be beneficial to the health and wellbeing of the animal.

- HabiStat Pure Calcium
- HabiStat Reptavite
- HabiStat Repton
- Arcadia Earth Pro-A

HEALTH & HYGIENE

We recommend the following cleaning routine to keep your animal healthy and happy:

	Water	Substrate	Enclosure
Daily	Change old water for fresh water	Spot clean	Check vents on enclosure are not blocked and allow air to pass through freely
Weekly	Disinfect water bowl or dish	Agitate substrate to prevent any bacterial build-up and remove any dirty substrate	Wipe down glass and walls with a reptile safe disinfectant
Monthly		Take out old substrate and replace with new substrate	Wipe down inside the enclosure and disinfect décor with a reptile safe disinfectant

Always wash your hands, surfaces and equipment with warm water and disinfectant immediately before and after handling the animal, any live-food, enclosure, and any other equipment using HabiStat Anti-Bac Spray for any surface, and HabiStat Hand Sanitiser for hand hygiene.

HANDLING & CARE

While this species is generally placid and will tolerate gentle handling, this can at times be very stressful for the animal, so any handling should only be done in short periods.

Things to look out for that will need veterinary assistance:

- Skin shedding problems (retained shed)
- Eyes discolouration or not opening
- Going off food
- Egg laying
- Loose bowel movements

Should your animal display any signs of distress, changes in regular behaviour, or anything visually different, please seek help from your Reptile Veterinarian.

ADDITIONAL INFORMATION

- This species will benefit from a deep substrate to burrow in.
- A varied diet is essential for the species
- Females of the species will eventually lay eggs. This can happen from 9 months old and upwards but can take several years, so it's best to be prepared with care for both pre and post egg laying.

DATA MONITORING

Complete this Sheet at the same time every day e.g. 12pm
